SartoAI

SOFTWARE + AI / FASHION, TEXTILES + APPAREL

From scattered information to clearer action.

Tailored software and AI for fashion, textile and apparel businesses.

SartoAI builds software around the way your team works - from fabric decisions and sample revisions to order follow-up and customer support. We start with one task and the information your team needs to act.

Connect the information to a decision.

A useful update shows what changed, where the information came from, who needs to respond and what happens next.

TAILORED SOLUTIONS / THREE POSSIBLE STARTING POINTS

Which orders need attention today?

Updates sit across emails, spreadsheets and production notes.

Possible solution: One view of status, sources, owners and follow-up.

Aim for your team: Clearer priorities and agreed next actions.

Is everyone using the latest specification?

Comments, files and approvals can drift between versions.

Possible solution: Link the current revision to its source, review and approval.

Aim for your team: A clearer handoff to sampling or production.

Which fabric options fit the brief?

Technical details and catalogue records are hard to compare.

Possible solution: Search available records against agreed requirements.

Aim for your team: See the options and missing information together.

These are starting points. We can also build new applications, integrations and automation around other business needs.

Project scope, data access and technical feasibility are assessed with your team.

Built around your work. Supported by technical expertise.

Industry knowledge

Textile and apparel workflow knowledge guides priorities, user needs and practical product decisions.

Architecture and technical review

Specialist academics and technical advisers contribute to architecture and technical detail according to each project.

Engineering and delivery

Engineers and engineering students support daily development, alongside AI-assisted tools and human review.

START WITH ONE TASK. AGREE WHAT A BETTER RESULT WOULD LOOK LIKE.

1. **Choose a real task**
2. **Define the pilot**
3. **Test with users**
4. **Review and plan**

We agree deliverables, data access, testing, onboarding and ongoing support in the proposal. Pilot results guide the next step.

Explore the applications behind our work.

Products address recurring tasks. Solutions can start from these workflows or a different business need.

Daisy	Design alternatives, revisions and draft technical packs.
Fabia	Fabric search, supplier quotations and sample-based selection.
Orain	Reviewed PDF imports, order stages and sourced follow-up.
Quai	Inspection evidence, independent QA review and reports.
Maria	Campaign drafts and content review using brand and product information.
Carin	Customer-support drafts with sources and human handoff.
Claire	PDF, Excel and images into Turkish production sheets for team review.

Application access and scope vary; we confirm suitability for your use case. Quai uses inspection rules rather than generative AI.

Which task takes your team too much time to find, check or follow up?
