Fabia

Your digital fabric specialist

From a fabric brief to a considered choice.

Describe your need by text or voice. Compare fabrics you can access and connect supplier replies, samples and quotations to the same project decision.

WHICH WORK DOES IT HELP WITH?

Finding the right fabric across catalogues, samples and messages requires a view of both technical requirements and sourcing conditions.

KEY WORKING AREAS

Fabric briefs by text and voice

Catalogue search and three-fabric comparison

Samples, quotations and supplier replies

Supplier workspace and catalogue permissions

IN THIS GUIDE

01 Purpose and working areas

02 Benefits for everyday users

03 Other users and team handoffs

04 Workflow and an example scenario

05 Actual screen and review points

06 Getting started, measures and scope

Updated: 6 November 2026

How could it help in your role?

These work profiles describe benefits. Account permissions and access scope are configured separately.

Fabric buyer

Need: Assess technical requirements and sourcing expectations in the same search.

Daily use: Describe composition, weight, width, quantity and timing. Compare up to three fabrics and identify uncertain requirements or tests still needed.

Main benefit: Make the technical and commercial reasons behind a fabric choice easier to review.

Handoff and decision: Review and approve sample or quotation requests. A record is not an order or payment.

Design and product development

Need: Translate a product idea into specific fabric requirements.

Daily use: Clarify intended use, composition, width and performance needs. Review technical fabric information and sample evaluations.

Main benefit: Discuss aesthetic expectations alongside technical requirements and identify checks that need a physical sample.

Handoff and decision: Connect tests and sample decisions to the record; do not assume missing certification details.

A QUESTION TO REVIEW TOGETHER

Which fabric suits this product, and why?

Working across the team

These work profiles describe benefits. Account permissions and access scope are configured separately.

Fabric supplier and catalogue owner

Need: Present a structured catalogue and control which information is shared.

Daily use: Review catalogue records and file-import previews. Select which fields to share, then respond to sample and quotation requests.

Main benefit: See the scope of shared product information and the requests still awaiting a reply.

Handoff and decision: Catalogue sharing is separate from a commercial offer. Authorised people confirm price, stock and delivery terms.

Sourcing or development lead

Need: Understand the choice rationale, missing tests and outstanding work.

Daily use: Review decision, sample, quotation and readiness records. Turn gaps into tracked work with an owner label and target date.

Main benefit: Identify the confirmations needed for a decision and make the follow-up plan explicit.

Handoff and decision: Adding an owner label does not send a message or invitation, or grant access.

WHAT SHOULD THE NEXT PERSON RECEIVE?

Search requirements, compared fabrics, sample and test status, and quotation details awaiting confirmation.

From a need to everyday use

This is a suggested sequence. Available screens and actions depend on your account access.

01 Describe the need

Describe the product, fabric and commercial requirements by text or voice. Start a separate search for a new brief; earlier conversations remain available.

Reviewing a past search is separate from resuming it.

02 Compare fabrics

Review private and shared catalogue records. Compare up to three fabrics and see which requirements are known or missing.

An exact name/code match alone does not establish suitability.

03 Follow samples and quotations

Distinguish a draft from a real request. Link a real request to the project and review the supplier reply, per-fabric price, unit, quantity and validity.

Preparing a draft and explicitly sharing a request are separate actions.

04 Record the reason for selection

Review quotations and sample assessments with confirmed receipt in the decision board, then record your selection and reason.

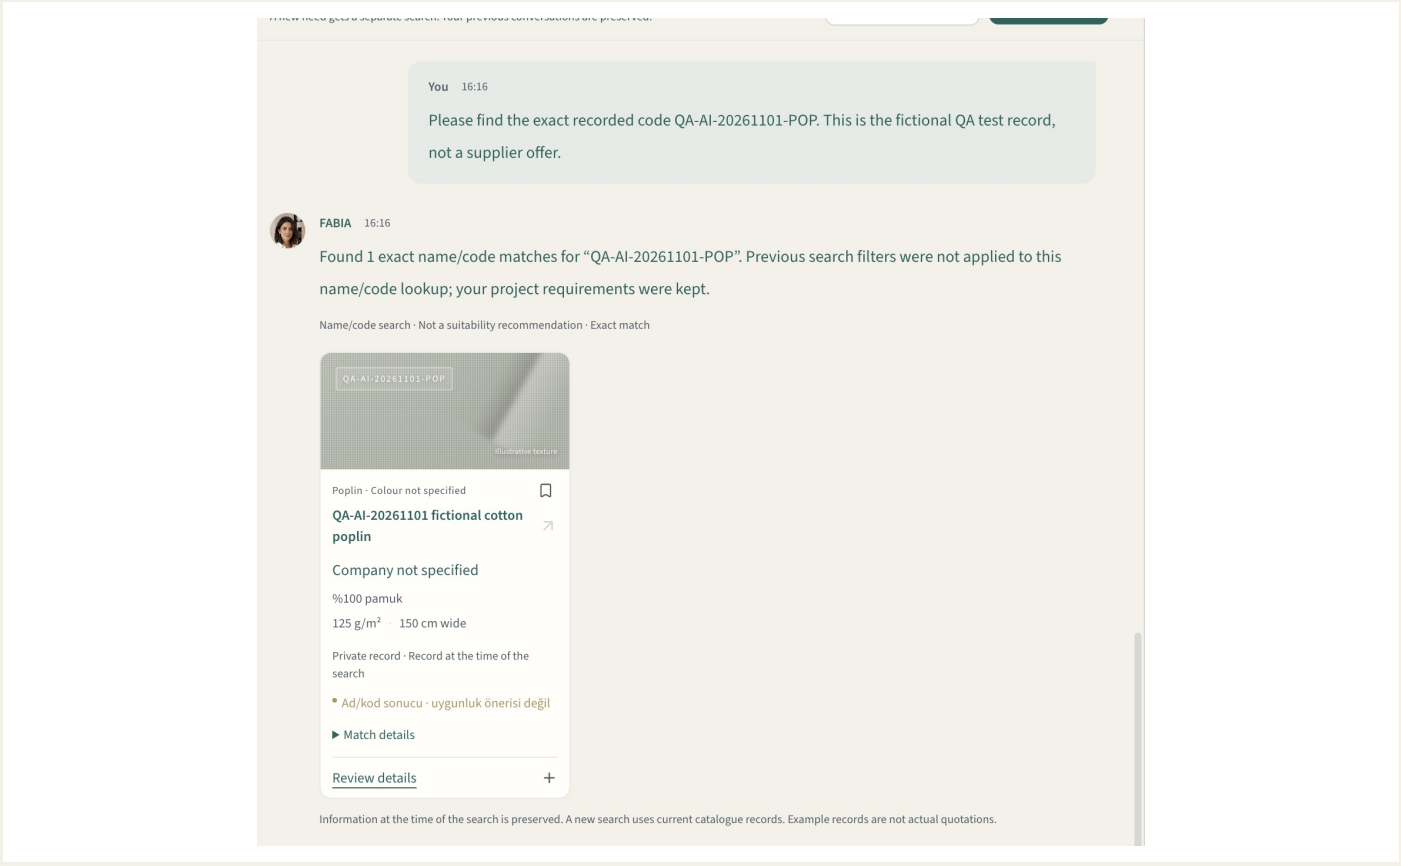

Recording a selection does not place a purchase order or make a payment.

EXAMPLE SCENARIO / FICTIONAL

Compare three poplins for a shirt by composition, weight and width. One may have the better price while another has the better sample assessment. Review actual quotation conditions and sample findings in the same project and record the reason for your choice.

Look inside the workspace

Read the example alongside the task and the information you need to check.

Application screen shown with fictional records.

A fabric code and its recorded specifications are visible together. Use search with the shortlist, real requests and decision board to move the fabric choice forward.

BEFORE MOVING THE WORK FORWARD

01 Assess technical suitability separately from a code match.

02 Distinguish a draft, a shared real request and a received quotation.

03 Confirm sample receipt and quotation validity before selecting.

Updated: 6 November 2026

Plan your first use

Choose a small real task, record the starting point and review the experience with your team.

BEFORE YOU START

01 Choose a product need and specifications to compare.

02 Check catalogue accuracy and sharing scope.

03 Identify who will decide on samples, tests and quotations.

HOW COULD YOU ASSESS THE BENEFIT?

- Time to find suitable options
- Information completed for comparison
- Options reaching sample evaluation

These are suggested measures, not achieved performance results or guaranteed savings.

SCOPE AND YOUR TEAM'S DECISIONS

Catalogue and request access depends on account and sharing permissions. Drafts are not sent automatically; real requests require an explicit sharing action. The application does not place orders, make payments or automatically notify suppliers of a selection. Confirm samples, tests, stock and commercial terms separately.

ACCESS AND NEXT STEP

Invited pilot · access for invited accounts.

Request a guided demo or a scoped pilot. We will review onboarding, usage and support needs together.
